REF No. 1.10

# SEASONALLY ADJUSTED INDICATORS

## 1971

## PREFACE

This is the fifth in a series of annual bulletins presenting in seasonally adjusted form selected statistical indicators of Australian economic activity. It continues the ninety-six series published in the 1970 edition and includes some additional series relating to unemployment and private capital expenditure published since then in other Bureau publications.

Presentation of these seasonally adjusted series is intended to serve as an aid in statistical interpretation and analysis. The series are shown as originally compiled and as seasonally adjusted, both in tabular and graphical form, covering where possible the past fifteen-year period. Selected seasonally adjusted series are also presented on semi-logarithmic charts to facilitate comparison of rates of growth of series of differing magnitude. Explanatory notes on the nature of the statistical series included in this bulletin are given in Appendix A, together with references to publications containing more detailed information.

The seasonally adjusted series published by this Bureau are calculated by electronic computer methods. The basic seasonal analysis programs employed are the X-11 variants of the U.S. Bureau of the Census Method II seasonal adjustment program, a brief outline of which may be found in the following "Notes on Seasonal Adjustment Methods".

It will be recognised that seasonal adjustment may be carried out by means of any one of a number of accepted procedures, each of which can be expected to yield results differing in greater or lesser degree from those of other methods. In interpreting particular seasonally adjusted statistics it is important, therefore, to bear in mind the methods by which they have been derived and the limitations to which the methods used are subject. The explanation of seasonal adjustment methods used by this Bureau, given in the following pages, together with details in Appendix B of the methods of adjustment employed for each seasonally adjusted series published by the Bureau, is intended to serve these purposes. To assist further in interpreting particular seasonally adjusted series, details of selected measures of variability for each individual series published in seasonally adjusted form by this Bureau are provided in Appendix C.

Further seasonally adjusted figures for each of the series included in this Bulletin will be published, as they become available, in the relevant monthly and quarterly publications of the Bureau referred to in Appendix A. Current figures for most of these series are also published in the *Monthly Review of Business Statistics* and the *Digest of Current Economic Statistics*.

## TABLES AND GRAPHS

### Production -

| | |
|---|---|
| Black coal | 32 |
| Electricity | 33 |
| Ingot steel | 34 |
| Cement | 35 |
| Clay bricks | 36 |
| Sulphuric acid | 37 |
| Motor vehicles | 38 |
| Electric motors under one hp | 39 |
| Domestic refrigerators | 40 |
| Television sets | 41 |
| Cotton woven cloth (excluding towels and towelling) | 42 |
| Woollen and worsted woven cloth (excluding blanketing) | 43 |
| Boots and shoes | 44 |
| Beer | 45 |
| Tobacco, cigars and cigarettes | 46 |
| Meat | 47 |
| Whole milk, all purposes | 48 |
| Wool received by brokers - first hand | 49 |

### Overseas Transactions -

| | |
|---|---|
| Total exports | 50 |
| Total imports | 51 |
| Exports of wool | 52 |
| Index of value of exports at constant prices | 53 |
| Index of value of imports at constant prices | 54 |
| Gold and net foreign assets - Official and banking institutions | 55 |

Net current expenditure on goods and services - Public authorities 129
Gross fixed capital expenditure - Total 130
Gross fixed capital expenditure - Private 131
Imports of goods and services 132
Exports of goods and services 133
Gold and net foreign assets - Official and banking institutions 55

## INTERPRETATION OF SEASONALLY ADJUSTED STATISTICS

Users of seasonally adjusted statistics should bear the following points in mind.

1. Seasonal adjustment is a means of removing the effect of the estimated normal seasonal variation from statistical series.

2. In the seasonal adjustment of certain statistical series published by this Bureau, adjustments have been made for the effects of some calendar irregularities, namely : "trading-day" effects (e.g. having four or five Fridays in a particular month); and the effects of movable holidays, i.e. Easter and Australia Day. These adjustments have been made where warranted by prior analyses. Since these adjustments materially affect the results, users should particularly note whether or not these calendar adjustments have been made to particular series. This is indicated in Appendix B.

3. Seasonal adjustment does not remove the effect of other influences from the statistics; in particular it does not remove any unusual irregular movement which may be present in any particular month or quarter (e.g. the effect of a major industrial dispute). Therefore, an unexpected upward or downward movement in a seasonally adjusted series does not necessarily denote a change of trend.

4. Among the irregular movements (i.e. those not removed by seasonal adjustment) would be movements due to any abnormal "seasonal" effect : e.g. the effect of the fruit-picking season starting early or late in a particular year. This effect would remain in the adjusted figures.

5. The methods of seasonal adjustment employed allow for gradual changes in the seasonal pattern, so that current figures are adjusted in accordance with the estimated normal seasonal pattern of the recent past.

6. However, the methods used may not give an adequate adjustment if there should be an abrupt change of seasonal pattern in any series in the future.

7. The methods have required judgment to be used in the choice of certain specifications - though once the specifications have been chosen, the adjustment of the statistics proceeds each month without subjective judgment having to be used. For this reason the adjusted series are always in a sense estimates, and are not definitive statistics in the same sense as the original statistics are.

8. Seasonally adjusted statistics will be revised following revisions to the original data and as additional years are brought into the analysis.

9. *For these reasons, therefore, it would be neither reasonable nor prudent to regard seasonally adjusted series as in any way "definitive". They must be treated with caution as being no more than useful indicators of movements. They can without doubt be a useful aid to critical interpretation, but can in no way be a substitute for it.*

For a more complete explanation of how the series included in this bulletin have been seasonally adjusted and how the results should be interpreted, reference should be made to the description which follows of the seasonal adjustment methods adopted.

# NOTES ON SEASONAL ADJUSTMENT METHODS

## Introduction

It is often useful and sometimes necessary in interpreting quarterly and monthly statistical series to recognise and take account of the element of variation due to what are commonly known as seasonal influences. As a supplement to personal judgment, statistical techniques can be used to evaluate the effects of normal seasonal influences operating on a series. This kind of evaluation does not call for subjective judgment except in the choice of the appropriate statistical techniques. The techniques are called seasonal analysis, and they are designed to enable the series to be seasonally adjusted - that is, to have the estimated effects of normal seasonal influences removed from them.

2. Normal seasonal influences on statistical series are those influences that tend to recur regularly once or more a year. Not all statistical series are affected by seasonal influences in a manner regular enough to be called "normal"; if they are not they cannot usefully be seasonally adjusted. Those that are seasonally affected usually reflect the influence of the seasons themselves (either directly or through production series related to them, such as farm production), or social conventions (such as the incidence of holidays) or administrative practices (such as the timing of tax payments). Many of them also reflect differences in the number of days in the month.

3. It is important that users have a clear understanding of what has been removed from the series by seasonal adjustment, and the limitations to which the seasonally adjusted series are subject. It is hoped that these introductory notes will help to achieve this object. A more detailed description was given in *Seasonally Adjusted Indicators 1967*.

## Basic Processes of Seasonal Adjustment, Simple Methods

4. Most series are seasonally adjusted by dividing the original figures by factors which represent in ratio form the effects of normal seasonal influences on the various months in that series. Such adjustment is called *multiplicative*. Less common is *additive* adjustment, in which estimated seasonal *differences* are deducted from the original series.

5. In estimating seasonal adjustments, it is first necessary to calculate *trend* values for each month (or quarter) in the series. The simplest estimate of trend is the centred twelve-month moving average of the original series. A twelve-month moving average of the original series is another series, each term of which is the average of twelve consecutive monthly figures in the original series. The centre of this moving average would fall between the sixth and seventh month. To make it coincide with a particular month, the average is then taken of all pairs of consecutive months in the moving average series itself. This second moving average is called a centred twelve-month moving average, and is equivalent to a 2 x 12- term moving average, that is a two-term moving average of a twelve-term moving average. The corresponding simple estimate of trend for a quarterly series is obtained by a 2 x 4- term moving average.

6. A set of ratios (larger or smaller than one) or differences (plus and minus) may be obtained by dividing the original series by the trend figures, or by subtracting the trend figures from the original figures. The ratios or differences so obtained are known as *seasonal-irregular* ratios or differences and are considered to include both normal seasonal influences and other, irregular, effects peculiar to the month or quarter in question.

7. The normal *seasonal* influence for each of the twelve months of the year is estimated as an average of the seasonal-irregular ratios or differences for that month of successive years. The average ratios or differences are referred to as seasonal factors or seasonal differences. They may be used to adjust the original series for the normal seasonal movement of which they are estimates, thereby giving a seasonally adjusted series.

## Seasonally Adjusted Figures as Combination of Trend and Irregular Components

8. These simple methods reflect the assumption underlying most seasonal adjustment methods, namely, that the original series can be represented by three components: *trend*, *seasonal* and *irregular*. Removing the trend (either by division or subtraction) leaves the seasonal-irregulars. The seasonal (for each month or quarter of the year) is derived from these by averaging them, in order to "cancel out" irregulars. The irregular can be isolated in turn by removing both the trend and the seasonal from the original figure. It is to be noted that the existence of a seasonal as a component of a figure in a statistical series is merely an assumption. The "true" seasonal, if it exists, is not known, and the methods available only enable it to be estimated. Similarly, the trend is only the estimated trend, as the "true" trend is not known. The irregular depends entirely on the value of the estimates of seasonal and trend.

9. The most important inference to be drawn is that seasonally adjusted series reflect irregulars as well as trend. Therefore, they may not be the "smooth" series the user may expect, and they can be used only approximately as measures of trend. An apparent change of direction from one month to another may have been due to the irregular component, not to a change of trend, and the series may resume its former movement the following month. Therefore, to determine whether a given change of direction in a seasonally adjusted series is a "downturn" or an "upturn" in the trend, requires judgment on the part of the user, which must be based largely on the extent to which the adjusted series has shown irregular movements in the past.

10. It may be noted in passing that a particular kind of irregular movement occurs if there is a temporary change in seasonal influence. For example, unemployment may increase each year as the fruit-picking season ends, but the season may end a month early in one year. The resulting rise in unemployment may, therefore, not be offset by seasonal adjustment until the following month, when unemployment would be expected to increase according to the normal seasonal pattern. Therefore, the seasonally adjusted figures will show an irregular increase, followed by an irregular decrease a month later.

## Census Method II, X-11 Variant

11. This Bureau has adopted for its standard methods of seasonal adjustment, the X-11 Variant of the Census Method II Seasonal Adjustment Program and its companion quarterly program X-11Q. Some minor changes have been made to the basic programs in the Commonwealth Bureau of Census and Statistics, and they have been extended to meet specific Australian requirements and to facilitate automatic presentation of results in the format preferred by this Bureau. No more than a general outline of the features of these programs is offered in this note. For further details, reference should be made to *The X-11 Variant of the Census Method II Seasonal Adjustment Program*, Technical Paper No. 15, United States Department of Commerce, Bureau of the Census, November 1965.

## Features of the X-11 Programs

12. These programs are essentially elaborations of the classical methods of seasonal adjustment, incorporating features specifically designed to overcome shortcomings of simpler methods.

13. The more important features of the monthly X-11 program may be summarised as follows.

(a) It provides for additive as well as multiplicative adjustment (i.e. difference-from-trend as well as ratio-to-trend).

(b) It yields improved trend estimates by applying an appropriate moving average (chosen automatically from three alternatives of different lengths and weights) to preliminary seasonally adjusted values, thereby reducing the effects of any residual trend on estimates of seasonal and irregular components. Trend estimates are made for each month of the series and thus permit estimates of seasonal-irregulars over the entire series (including the first and last six months).

(c) It identifies and discounts the effects of extreme values in estimating seasonals and trend values.

(d) It allows for gradual changes of seasonal pattern from year to year, estimating seasonals for each period as an appropriate weighted average of seasonal-irregulars for months of the same name. Four alternative weighted moving averages are provided, for series of differing degrees of irregularity.

(e) It estimates forward factors for the twelve months after the latest figure of the series, thus enabling adjustment of additional figures for up to a year without re-analysis.

(f) It provides for "trading-day" adjustments and for the estimation of such adjustments from the series itself.

(g) It allows for optional prior adjustment of the series before analysis, to permit adjustment for influences not otherwise provided for. This facility can be used, among other things, to adjust for the changing effects of holidays such as Easter which may differently affect months in successive years.

(h) It provides as an option a further procedure designed to prevent the seasonal adjustment from being distorted by the effects of any severe industrial disputes.

(i) It provides a range of summary measures which can be useful in selecting from among the various options available for the analysis and adjustment of the series and in interpreting movements in the adjusted series.

14. The companion X-11Q program used for quarterly series is similar in its features but does not provide for the estimation of trading-day adjustments, or for alternative types of weighted moving averages in the estimation of seasonal factors and trend.

15. The programs proceed by iteration. The series is firstly adjusted by any prior adjustments or preliminary trading-day adjustments. The initial centred twelve-month or four-quarter moving average is used to derive provisional seasonal factors and a provisional seasonally adjusted series. This series is then subjected to trend-fitting; seasonal factors are re-estimated; a new seasonally adjusted series is obtained and the trend is removed to obtain irregulars; if required, residual trading-day variation is estimated and removed from the irregulars; extreme irregulars are identified and modified; and the process is repeated with trend being re-estimated from a modified original series. Because seasonal, trend and irregular are complementary parts of a whole, any improvement effected by the process of iteration in the estimate of one part improves the others.

## Summary of X-11 Program Options

16. A wide variety of seasonal adjustment procedures is permitted by either program. This is to suit the widely differing characteristics of series in respect of the magnitude of the trend, seasonal and irregular components of variation and some spasmodic influences which may affect series. The following is a brief account of the available program options and the way in which they are applied.

(a) Additive or multiplicative adjustment. For economic series which have only positive values, seasonal variations usually tend to be proportional to trend. Therefore, the multiplicative method is usually the more appropriate. Additive adjustment is likely to be appropriate if a series can take both positive and negative values.

(b) Variable trend-cycle curve routine. The program provides as optional alternatives 9-, 13-, or 23- term (Henderson) weighted moving averages of the initially estimated seasonally adjusted series for purposes of trend estimation. The appropriate weighted moving average may either be selected automatically by the computer or be specified independently. If the irregular variation tends to be high in relation to the variation in trend, a long moving average is indicated to smooth out the effects of the irregulars. If it tends to be low, a short moving average is indicated, to fit the trend more closely to the curves of the data. The X-11Q program provides only a 5- term weighted moving average.

(c) Seasonal factor curve routine. The X-11 program provides as optional alternatives for estimating seasonal factors 3-, 3 x 3-, 3 x 5-, or 3 x 9- term weighted moving averages or a simple average covering all years of the series. Unless otherwise specified, the program employs as standard a 3 x 5- term weighted moving average, but any of the alternatives may be employed for estimating seasonal factors for any named month. (For series in this bulletin the standard 3 x 5- term moving average has been used, except for some series having irregular variation which is relatively high in relation to the estimated year-to-year change in seasonal factors. For these series the 3 x 9- term moving average has been used for all months). The X-11Q program provides only a 3 x 5- term weighted moving average.

(d) Graduated treatment of extremes. Both programs provide for graduated treatment of extremes, giving reduced or zero weight to seasonal-irregulars, in the calculation of seasonal factors, for months in respect of which the estimated irregular is identified as extreme by reference to their standard deviation. Zero weight is given if the estimated irregular exceeds 2.5 standard deviations, full (unit) weight if it is less than 1.5 standard deviations, and a proportionate intermediate weight if it is between these limits. This routine avoids or lessens the effect on seasonal factors of large irregulars or sharp changes in trend. Alternative limits may optionally be specified.

(e) Trading-day adjustment. Only the X-11 program provides for trading-day adjustment, this feature generally being unnecessary for quarterly series. If used, trading-day weights (a weight for each day of the week) upon which the trading-day adjustments are based, may be derived alternatively from prior estimates derived from data independent of the series, or from regression estimates based upon an analysis of the series itself, performed automatically as part of the X-11 program. A third alternative option is a combination of prior and residual regression estimates, again provided automatically by the program. Further options provide for combination of length-of-month adjustments with either the seasonal factors or the trading-day adjustments; application of regression estimation of trading-day weights either to the whole series or the part of a series following a specified year; and variation of limits for identifying extremes for purposes of the trading-day regression. Trading-day adjustments made to series in this bulletin rely almost entirely on regression estimates obtained using the X-11 program.

(f) Adjustment for severe industrial disputes. By the application of this option, the figures for months or quarters affected by an industrial dispute are replaced in the calculation of trend by substitutes more in line with preceding and subsequent figures. The seasonal-irregulars for the period are then more clearly identified and discounted as extreme, while the effects of the industrial dispute are fully reflected in the seasonally adjusted series. Care must be exercised in using this option which may also affect estimation for periods of marked trend change. No use has been made of this option in the adjustment of series included in this bulletin.

(g) Prior adjustment. Prior to seasonal analysis, an adjustment may be made to any one or more of the figures in a series to yield a prior adjusted series. Seasonal factors for the prior adjusted series are then estimated and are used, either by themselves or combined with the appropriate prior adjustment factors, to seasonally adjust the original series. This technique is used mainly to effect calendar adjustments *other than* for monthly or quarterly patterns for which both the X-11 and X-11Q programs provide, and weekly trading-day patterns in monthly series for which the X-11 program provides. Calendar effects, where measurable, are estimated by regression methods on the basis of the series' past behaviour. These measures are then used to deduce prior adjustment factors appropriate to each month or quarter of the series. Combining these prior adjustments with seasonal adjustments derived from seasonal analysis of the prior adjusted series provides combined adjustment factors by which the original series is seasonally adjusted. Such uses made of prior adjustment are :

*(i)* *Trading-day variation in quarterly series* where measurable trading-day patterns are detected;

*(ii)* *Special types of trading-day variation* other than simple weekly patterns, such as fortnightly pay-days and twelve-weekly payments of child-endowment;

*(iii)* *Movable public holidays*, namely, Easter which may fall either in March or April, and Australia Day which may fall either in January or February, where such effects are measurable and significant.

Alternatively, or in addition, prior adjustment may be used in cases of series subject to abrupt discontinuities affecting the seasonal pattern or the trend, or exceptionally large irregular movements where they would, if not allowed for in the seasonal analysis, adversely influence the estimation of seasonal factors, at least for periods immediately preceding and following such influences. This technique is used in this way only in cases of discontinuities or irregularities of a magnitude larger than may be handled satisfactorily by the graduated treatment of extreme values performed by the X-11 programs (see (d) above) and then only when the nature of the disturbance is understood and its magnitude known sufficiently accurately. Prior adjustment factors may be estimated by statistical comparison of data before and after the change or on the basis of supplementary information if available. These prior adjustment factors are applied in cases of discontinuities to the figures for months or quarters preceding the discontinuity, to align their seasonal pattern or trend with that of subsequent original figures; and in the case of exceptional irregular movements, to the months or quarters affected to align their figures with original figures for preceding and succeeding periods. Seasonal adjustment factors are then derived for the prior adjusted series, and are thus unaffected by the discontinuity or irregularity so allowed for. As is evident from the manner described below of effecting seasonal adjustment, is is relatively insensitive to the magnitude of the prior adjustment factors used. Such cases in which use is made of prior adjustment are:

*(iv)* *Abrupt changes in seasonal pattern*, for instance those affecting several production series following the extension of statutory annual leave in October 1963. In this case, prior adjustment factors are combined with the seasonal adjustment factors derived from the prior adjusted series to yield combined factors by which the original figures are seasonally adjusted. This technique cannot reasonably be applied at the time of the change in seasonal pattern, but only some years after the event when the magnitude and persistence of the discontinuity is established.

(v) *Abrupt trend discontinuities*, which can arise from a change in the concepts, definitions or coverage of a statistical series, as for instance in seasonally adjusting indexes of values of exports and imports at constant prices, breaks in which occur owing to changes of base year. Seasonal factors derived from the prior adjusted series are applied directly to the original series to yield a seasonally adjusted series which fully reflects the trend discontinuity. This technique is particularly useful where the discontinuity affects the most recent months or quarters of a series, as without it satisfactory seasonal adjustment may not be possible. In this case, however, a pre-requisite is a satisfactory estimate of the magnitude of the trend discontinuity.

(vi) *Exceptionally large irregular movements*, which might result from a severe industrial dispute or similar exceptional events. As in the case of trend discontinuity, seasonal adjustment factors derived from the prior adjusted series are applied to the original series, so that the effects of the exceptional movement are fully reflected in the seasonally adjusted series. This technique is only applied retrospectively.

17. In the interpretation of seasonally adjusted series, the application of standard options may be taken largely for granted by users of seasonally adjusted series as being technical in nature. These are the options concerning multiplicative or additive adjustment, the variable trend-cycle curve routine, the seasonal factor curve routine and the graduated treatment of extremes. Users should take note of whether use has been made of trading-day adjustments, prior adjustments for any purposes, and adjustment for severe industrial disputes. This is important as their application can markedly affect the results obtained and the interpretation to be placed on them.

18. Except where the series have been adjusted aggregatively (see below), the particular program options employed in the adjustment of series published by this Bureau are set out in Table 1, Appendix B, "Methods of Adjustment Employed".

## Aggregative Seasonal Adjustment

19. The foregoing account of the application of the X-11 programs applies to the adjustment of a series as it stands, that is the *direct adjustment* of the original series. Alternatively it is possible to adjust an aggregate series by seasonally adjusting a number of its components and adding up the results. In cases where the component series exhibit markedly different trends and seasonal patterns, *aggregative adjustment* may be preferred to direct adjustment. Numerous empirical studies made to date suggest that, mostly, little difference is discernible in the effectiveness of direct and aggregative adjustment and for some, direct adjustment appears superior. As direct adjustment is simpler in operation, its use is to be favoured generally unless the results are recognisably inferior to those of an alternative aggregative adjustment.

20. It is to be noted in this regard that certain series (such as those relating to employment, unemployment, registered vacancies, retail sales, value of work done on new buildings and capital expenditure) included in this bulletin appear both as components and aggregates. Following the approach mentioned in the previous paragraph, each of these series has been adjusted independently. This means that while the unadjusted components add to the totals, the adjusted components may not add to the adjusted totals. The differences are generally not large, in comparison with the month-to-month variability of the seasonally adjusted series.

21. On the other hand, most of the seasonally adjusted series for principal aggregates in the national accounts have been obtained aggregatively, that is by adding seasonally adjusted component series. Besides retaining, as far as possible, the essential accounting relationships, the aggregative approach is needed because many of the aggregates include components having different characteristics, and requiring different methods of adjustment.

22. In addition to the principal aggregates in the national accounts, aggregative adjustment is employed in seasonally adjusting certain series which are comprised of disparate components. Where series have been adjusted aggregatively, details of the methods used are presented in Table 2 in Appendix B.

## Summary Measures

23. The X-11 programs provide a large range of statistical measures, tests of significance and graphs which may be used in the choice of program options. Some of the summary measures help the user to interpret the results by giving an indication of the relative magnitude of the seasonal effects which have been removed from the series, and a guide as to how much of the variability of the series is due to trend and irregular elements. Some of the more important and easily interpreted summary measures for each of the series published by this Bureau are given in Appendix C, "Measures of Variability".

24. The summary measures given in Appendix C are the average percentage change from month to month (without regard to sign) in the original and seasonally adjusted series, in the trend and irregular series, in the seasonal factors, and in the trading-day adjustments where these have been made. For seasonal factors, the average percentage change from year to year (without regard to sign) is also given. This shows the average rate at which the seasonal pattern is estimated to have been changing from year to year.

25. The effects removed by any prior adjustments made, such as those made in some series for Easter or Australia Day, are not included in the summary measures relating to the trend and irregular series, seasonal factors and trading-day factors.

26. The measures of variability given in Appendix C serve to give some indication of whether a movement in a seasonally adjusted series is attributable to influences beyond the normal irregular variation and normal changes in the seasonal pattern. It is, however, to be borne in mind that measures of the month-to-month and year-to-year change given in Appendix C are averages; changes for the individual months and years may be considerably larger or smaller than the averages shown.

## Revisions to Seasonal Factors.

27. It is necessary to revise seasonally adjusted statistics from time to time. This is necessary not only because of amendments in the original series, but because the adjusted series is changed every time the computer analysis is repeated to bring in another year's figures. This means revision of the whole seasonally adjusted series, although the changes in early years would be expected to be minor. The fact that seasonally adjusted series will be revised every time the computer absorbs another year's data is inherent in the nature of the X-11 program and, in fact, all complex programs of this kind. In effect, the new data provide further observations upon which estimates of trend, seasonal factors and limits for identifying extreme values are based. The latter estimates, presumably the more accurate, can generally be expected to differ somewhat from earlier ones based upon less recent original data.

28. As a rough rule of thumb, derived from Australian monthly series analysed to date, the average of the differences for the most recent common year, between successive revisions in the seasonally adjusted monthly series, can be expected to be approximately one-half the average percentage change from month to month in the irregular series (given in Appendix C), but this can be expected to fall to about one-fifth of the average percentage change from month to month for years four or more earlier. Comparable revisions to quarterly series can be expected.

29. In the seasonally adjusted figures for some individual months, however, some revisions may be considerably larger (or smaller) than those suggested by this rule of thumb. The tendency to larger revisions is most marked for months affected by large changes in trend or seasonal pattern. As might be expected, the tendency of successive revisions is generally to "smooth out" fluctuations appearing in the initial seasonally adjusted series.

## National Accounts Series

30. This bulletin includes a selection of the seasonally adjusted series published in *Quarterly Estimates of National Income and Expenditure*. Owing to the difficulty of obtaining the necessary up-to-date and detailed data, much of the current information used in preparing the original figures of Quarterly Estimates of National Income and Expenditure is usually of an approximate nature and is subject to revision as more complete and accurate information comes to hand. Consequently, both the original and seasonally adjusted series are subject to frequent amendments. As mentioned above in Paragraph 21 most of these series of seasonally adjusted national accounting aggregates have been derived using aggregative methods, that is as the sum of seasonally adjusted component series rather than by direct adjustment of the aggregate series. Also since some of the series are not amenable to the usual methods of seasonal adjustment, special methods of adjustment have been used in some cases. A description of the methods of adjustment employed is given in Appendix B.

## Limitations of Seasonally Adjusted Statistics

31. Despite their versatility, the X-11 programs rely essentially upon the logic of the simple classical methods described earlier. Although they overcome many of the shortcomings of simpler methods, they are subject to the same basic limitations of all such methods. Of these, the most important limitation stems from the inherent impossibility of defining precisely the trend, seasonal and irregular components (at least for statistics relating to economic and social phenomena) except in terms of estimates obtained by a particular method. Consequently, no objective assessment of reliability may be made for any such methods, and comparisons of results obtained by alternative procedures must always involve an element of judgment.

32. A further limitation derives from a fundamental assumption underlying seasonal analysis and adjustment techniques. It is assumed implicitly that while trends and seasonal patterns underlying the series may change, such changes are not abrupt. The X-11 programs, and in fact all seasonal adjustment programs yet developed, tend to yield recognisably unsatisfactory results where an abrupt change affects the seasonal pattern of a series.

33. The optional alternative procedures allowed by the X-11 programs provide some means for overcoming problems of this kind. However, the remedies provided by the X-11 program are available only some time after the change has occurred. It is impossible for the most part to recognise and assess changes in seasonality at the time they occur. The seasonal analysis alone cannot indicate whether an unexpected movement appearing in current seasonally adjusted figures denotes a variation in trend or an unusual (irregular) effect, or whether it is due to an abrupt change in seasonality.

34. Furthermore, it is to be borne in mind that by using alternative program options the X-11 programs will yield results which may differ markedly from each other. As implied above, it is sometimes by no means easy to decide which of some feasible options should be employed.

35. Consequently, it would be neither reasonable nor prudent to regard seasonally adjusted series as in any way "definitive". They must be treated with caution as being no more than useful indicators of movements. They can without doubt be a useful aid to critical interpretation, but can in no way be a substitute for it.

## Presentation of Seasonally Adjusted Statistics.

36. So that the most recent statistics may be seen in ample context, the series given in this bulletin, where possible, cover a span of about fifteen years. As in previous issues, the statistical series in this bulletin are presented as originally compiled and as seasonally adjusted, both as tables and in graphical form on charts of natural (arithmetic) scales. In addition, a selection of seasonally adjusted series is presented on semi-logarithmic charts to facilitate comparison of rates of growth of series of differing magnitude.

37. Additional information, beyond that appearing with the figures for each series, is given in Appendix A under "Explanatory Notes" and in the publications listed in Appendix A.

38. Further seasonally adjusted figures for each of these series will be published, as they become available, in the relevant current publications of the Bureau of Census and Statistics and other authorities as shown in Appendix A.

39. Seasonally adjusted series which are published by this Bureau, but not included in this Bulletin, are listed in Appendixes B and C together with details of the methods of adjustment used and selected measures of variability.

SEASONALLY ADJUSTED INDICATORS

1971

ADDENDUM

The following figures have become available since tables and graphs for these particular series were prepared for this bulletin.

| Page | Series | | Original | Seasonally Adjusted |
|---|---|---|---|---|

r - revised
p - provisional estimate, rounded to nearest million dollars

ERRATUM : Exports of goods and services, page 133. Original series for Sept. qtr 1967, graphed as $958m, should be $858m as shown in the table.

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS

CANBERRA A.C.T. 2600 28 JUNE 1971

# SEMI-LOGARITHMIC CHARTS

GENERAL NOTES

(1) All seasonally adjusted figures are subject to revision.

(2) All figures relate to Australia as a whole unless otherwise stated.

(3) All values are in Australian dollars.

(4) A brief description of the timing, coverage, etc. of each series is given in Appendix A.

(5) The symbol P, where shown in tables, means preliminary - figure or series subject to revision.

(6) The same logarithmic scale is used in all semi-logarithmic charts.

# APPENDIX A

## EXPLANATORY NOTES AND PUBLICATIONS FOR FURTHER REFERENCE

The notes below provide further information on the nature of the series published in this bulletin and references to publications for further details. The publications referred to are, with few exceptions, those monthly and quarterly statements of the Bureau in which subsequent seasonally adjusted figures are to be published.

Subsequent seasonally adjusted figures for most series will also be included in the *Monthly Review of Business Statistics* and a selection will be included in the *Digest of Current Economic Statistics*.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| PRODUCTION - | | | |
| Black coal | 32 | - | 10.19; 12.14 |
| Electricity | 33 | Total generated, including electricity not for sale. | 12.14; 12.15; 12.16.5 |
| Ingot steel | 34 | Includes recovery from scrap. | 12.14; 12.15 |
| Cement | 35 | Portland cement. | 12.14; 12.15; 12.16.49 |
| Clay bricks | 36 | - | 12.15; 12.16.49 |
| Sulphuric acid | 37 | In terms of 100% acid. | 12.14; 12.15; 12.16.2 |
| Motor vehicles | 38 | Cars, station wagons, utilities, panel vans, trucks and truck type vehicles, omnibuses and ambulances. Includes vehicles which are disposed of by the manufacturer in a partly finished state. Prior to July 1963 the series related to the production of motor vehicles bodies assembled from local and imported panels. | 12.14; 12.15; 12.16.33 |
| Electric motors under 1 hp | 39 | Includes those made and incorporated by manufacturers in their own products. | 12.14; 12.15; 12.16.23 |
| Domestic refrigerators | 40 | Electric and gas. | 12.14; 12.15; 12.16.9 |
| Television sets | 41 | Includes combination with radio, etc. | 12.14; 12.15; 12.16.34 |
| Cotton woven cloth | 42 | Cotton woven cloth (including mixtures predominantly of cotton) over 12" wide. | 12.14; 12.15; 12.16.14 |
| Woollen and worsted woven cloth | 43 | Woollen woven cloth (including mixtures predominantly of wool) over 12" wide. | 12.14; 12.15; 12.16.17 |
| Boots and shoes | 44 | Includes sandals and moulded plastic footwear. Excludes thongs, sandshoes, galoshes and gum boots. Prior to July 1963 excludes all slippers. From July 1963 includes cemented, vulcanised rubber and injection moulded plastic slippers but excludes all other slippers. | 12.14; 12.16.28 |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| PRODUCTION - *continued* | | | |
| Beer | 45 | From July 1961 to June 1968, monthly production figures, collected by the Department of Customs and Excise, include waste beer. All other figures, collected by this Bureau, exclude waste beer. | 12.14; 12.15; 12.16.42 |
| Tobacco, cigars and cigarettes | 46 | - | 12.14; 12.15 |
| Meat | 47 | In terms of fresh meat for human consumption (carcass weight). Total production including estimates of meat from animals slaughtered on farms. | 10.16; 12.14 |
| Whole milk | 48 | Includes whole milk used for factory butter, cheese and processed milk products, as well as fluid milk for domestic purposes. | 10.6; 12.14 |
| Wool received by brokers, first hand | 49 | Bales received into selling brokers' stores for disposal, excluding quantities received for re-sale. | (a) |
| OVERSEAS TRANSACTIONS - | | | |
| Total exports | 50 | Total value of exports recorded in month. | 8.9; 8.12 |
| Total imports | 51 | Total value of imports recorded in month. | 8.10; 8.12 |
| Exports of wool | 52 | Sheep and lambs wool excluding skins and yarns. | 8.5; 8.9 |
| Indexes of value of exports and imports at constant prices | 53<br>54 | These indexes are compiled on the basis of recorded statistics of exports and imports. They measure change in the value of exports or imports after the direct effects of price changes have been eliminated. They may be thought of as being derived by expressing the value of each export or import item as the product of a price and a quantity, and by then substituting for each actual current price the corresponding price in the chosen base year. The total value of exports or imports in the current year, expressed at the prices of the base year, is then obtained by summing and is converted to an index number by dividing by the total value of exports or imports in the base year. | 8.21; 8.22 |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| OVERSEAS TRANSACTIONS - *continued* | | | |
| Gold and net foreign assets - Official and banking institutions | 55 | Australia's official reserve assets (including gold tranche position with the International Monetary Fund as well as holdings of special drawing rights issued by the I.M.F.) and net foreign exchange holdings of trading banks. | (b) |
| OVERSEAS ARRIVALS - | | | |
| Short-term visitors arriving | 56 | Visitors arriving who state that they intend to stay in Australia for a period of less than one year, including U.S. troops visiting Australia on rest and recreation leave. | 4.2; 4.3 |
| EMPLOYMENT AND LABOUR - | | | |
| *Civilian Labour Force* - | | | 6.20 |
| Males | 57 | Estimates are based on the results of a quarterly population survey, which is carried out on a one per cent sample throughout Australia in February, May, August and November each year. About 38,000 private dwellings (houses, flats, etc.) are visited during each survey, as well as a sample of other dwellings (hotels, motels, etc.). The survey information is obtained by means of personal interviews carried out by specially trained enumerators. The estimates relate to all persons aged 15 years and over, except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.<br><br>*The labour force* comprises the employed and the unemployed. The remainder of the population is classified as not in the labour force.<br><br>*Employed persons* comprise all those who, during survey week<br>(a) did any work for pay, profit, etc. in a job or business, or on a farm, or<br>(b) worked fifteen hours or more without pay in a family business (or farm), or | |

| | | (c) had a job, business or farm, but were not at work because of illness, accident, leave, holiday or industrial dispute; or because of production hold-up due to bad weather, plant breakdown, etc.<br><br>*Unemployed persons* comprise all those who, during survey week, did no work at all, and who either<br><br>(a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week), or<br><br>(b) were laid off from their jobs without pay for the whole week.<br><br>*The labour force participation rate* for any group is the percentage of persons in that group who are in the labour force. | |
| *Wage and Salary Earners in Civilian Employment* - | | Original data except those relating to government employees, are based on benchmarks derived from the population censuses of June 1954, 1961 and 1966. Estimates for other months are derived from current pay-roll tax returns, returns of government employment, some other direct returns of employment, and estimates of the number of employees not covered by these collections. Defence forces and employees in agriculture and private domestic service are excluded. Two series of estimates are shown, the first covering the period June 1954 to June 1966, the second the period from June 1966. The census definitions at the 1954 and 1961 Censuses were such that a person's labour force status tended to be determined according to his major activity, and hence many part-time employees were classified as not employed. At the 1966 Census, labour force status was based on a person's actual activity during a specified week. As a result the current estimates are at higher levels than the 1954 to 1966 estimates. In due course, estimates for the period | 6.4; 6.12 |
| Persons | 66 | | |
| Private - Persons | 67 | | |
| Government - Persons | 68 | | |
| Manufacturing - Persons | 69 | | |

|---|---|---|---|
| EMPLOYMENT AND LABOUR - *continued* | | | |
| Factory overtime | 83 | Results obtained from a survey of overtime worked in a number of larger private factories throughout Australia. | (d) |
| INTERNAL TRADE - | | | |
| *Retail Sales* - | | The figures relate to retail sales of goods (as distinct from services, repairs, accommodation, entertainment, meals, etc.) by establishments which normally sell goods by retail to the general public from shops, rooms, kiosks and yards. Hotels, garages and service stations are included in respect of goods sold, but establishments such as clubs and guest houses are excluded. For the monthly series only, garages and service stations are also excluded. Goods sold from farms direct are also excluded. Original figures from the month of April 1970 and from June quarter 1970 are subject to revision when more precise information is available relating to trading by new businesses. | |
| Monthly retail sales - All items (excl. motor vehicles, parts, petrol, etc.) | 84 | | 11.6 |
| Quarterly retail sales - | | | 11.4; 11.5 |
| Food and drink | 85 | | |
| Clothing, hardware, etc. | 86 | | |
| All other goods (excl. motor vehicles, parts, petrol, etc.) | 87 | | |
| All items (excl. motor vehicles, parts, petrol, etc.) | 88 | | |
| Motor vehicles, parts, petrol, etc. | 89 | | |
| *Registrations of New Motor Vehicles* - | | Registrations processed by the motor vehicle registration authorities in the States and Territories during the period. The figures include new Commonwealth-owned vehicles other than those belonging to the defence services. | 14.2; 14.6 |
| Motor cars and station wagons | 90 | | |
| Other vehicles | 91 | | |
| Total | 92 | | |
| New wheeled tractors sold for agricultural purposes | 93 | Up to June 1965 the figures were collected by the Department of Primary Industry. From September 1967, a "tractor" is defined as a prime mover mounted on wheels which has been designed for general use and which may be fitted with a variety of agricultural, earth-moving or materials-handling attachments. | 12.18 |

(d) As in (c) above. Seasonally adjusted data also included in *Digest of Current Economic Statistics*.

* See page 147 for key.

|---|---|---|---|
| BUILDING, ETC. - | | | |
| New houses and flats approved - Number | 94 | Building permits issued by local government authorities and contracts let, work commenced and day labour projects authorised by government authorities. Number of houses and flats relate to individual living units. Value of total buildings approved includes all alterations and additions. | 3.2; 3.5 |
| New private houses and flats approved - Number | 95 | | |
| Value of total buildings approved | 96 | | |
| New houses and flats commenced - Number | 97 | Compiled from returns obtained from building contractors engaged in the erection of new buildings, owner builders and government authorities. Number of houses and flats relate to individual living units. Values exclude the value of land and represent the estimated value of buildings on completion. | 3.5; 3.6 |
| New private houses and flats commenced - Number | 98 | | |
| Value of new private buildings commenced | 99 | | |
| Value of new buildings, other than new houses and flats, commenced | 100 | | |
| Value of total new buildings commenced | 101 | | |
| New houses and flats completed - Number | 102 | | |
| New private houses and flats completed - Number | 103 | | |
| Value of work done on new houses and flats | 104 | | |
| Value of work done on other new buildings | 105 | | |
| Value of work done on all new buildings | 106 | | |
| *Capital Expenditure by Private Businesses* - | | Statistics are from returns obtained from private businesses subject to pay-roll tax (other than rural, professional, gas and electricity), from government banks and airlines, and from other businesses not subject to pay-roll tax undertaking projects of more than $500,000 in any half year. | 5.7; 5.8 |
| New buildings and structures | 107 | | |
| Other new capital equipment | 108 | | |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| BUILDING - *continued* | | | |
| Manufacturing | 109 | | |
| Mining | 110 | | |
| Other industries | 111 | | |
| Total new capital expenditure | 112 | | |
| Anticipated new capital expenditure | 113 | Anticipated by individual businesses at the beginning of the period. | |
| FINANCE - | | | |
| *Savings banks* - | | Particulars for the Commonwealth Savings Bank, The State Savings Bank of Victoria, The Savings Bank of South Australia, The Rural and Industries Bank of Western Australia and The Hobart Savings Bank relate to the end of the month, those for The Launceston Bank for Savings to the last Monday in the month, and those for the other savings banks to the last Wednesday in the month. Excludes External Territories. | 5.2; 5.28 |
| Depositors' balances | 114 | | |
| *Major Trading Banks* - | | Major trading banks comprise the Commonwealth Trading Bank, Australia and New Zealand Banking Group Ltd, The Bank of Adelaide, Bank of New South Wales, The Commercial Bank of Australia Ltd, The Commercial Banking Company of Sydney Ltd, The National Bank of Australasia Ltd. Includes External Territories. | 5.2; 5.3 |
| Total deposits | 115 | | |
| Loans, advances, etc. | 116 | | |
| Liquid assets and Commonwealth Government securities | 117 | Includes notes, coin, cash with Reserve Bank, Treasury bills and Treasury notes and other Commonwealth Government securities. | 5.2; 5.3 |
| Listed Companies - New money raised | 118 | Refers to companies listed on Australian stock exchanges. New money raised is the net amount of cash transferred from the investing public to the issuing companies through the issue of shares, debentures, notes and similar securities and the acceptance of deposits. | 5.9; 5.10 |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| FINANCE - *continued* | | | |
| | | As from the September 1970 quarter, the investing public has been redefined to include all non-company subscribers, Australian life insurance companies and Australian Government and private superannuation funds. The comparability of the statistical series, however, has not been significantly affected. For a full description of the changes in definitions see the latest issue of the statistical bulletin *New Capital Raisings by Companies in Australia* (Reference No. 5.9). | |
| *Instalment Credit for Retail Sales : Balances Outstanding* - | | Instalment credit schemes covered include hire purchase, time payment, budget account and personal loan schemes conducted by businesses primarily for the financing of retail sales of goods. | 5.18; 5.19 |
| Retail businesses | 119 | Schemes conducted by retail establishments which come within the scope of the Census of Retail Establishments, or by subsidiary finance businesses set up by retailers primarily for the purpose of financing their retail sales. | |
| Non-retail finance businesses | 120 | Schemes conducted by businesses, which are not themselves retailers, but which engage in financing such schemes. | |
| All businesses | 121 | - | |
| Taxation revenue, Commonwealth and State Consolidated Revenue Funds | 122 | Obtained from monthly statements of consolidated revenue and expenditure issued by Commonwealth and State Treasuries. Excludes any taxation collections paid direct to trust funds. | |
| NATIONAL ACCOUNTS - | | | |
| Gross national product | 123 | The total market value of goods and services produced in Australia within a given period after deduction of the cost of goods and services used up in the process of production, but before deducting allowances for the consumption of capital equipment. Thus gross national product, as here defined, is "at market prices". | 7.5; 7.6 |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| NATIONAL ACCOUNTS - *continued* | | | |
| *Gross National Product at Factor Cost* - | | That part of the cost of producing the gross national product which consists of gross payments to factors of production (labour, land, capital and enterprise). It represents the value added by these factors in the process of production and is equivalent to gross national product less indirect taxes plus subsidies. | 7.5; 7.6 |
| Farm | 124 | That part of gross national product at factor cost arising from production in rural industries (excluding forestry). | |
| Non-farm | 125 | That part of gross national product at factor cost arising from production in all industries other than rural. | |
| Wages, salaries and supplements | 126 | Payments in the nature of wages and salaries, including allowances for income in kind (board and quarters, etc.), together with supplements to wages and pay and allowances of members of the forces. Supplements consists of employers' contributions to pension and superannuation funds, direct payments of pensions and retiring allowances, and amounts paid as workers' compensation for injuries. | 7.5; 7.6 |
| Gross national expenditure | 127 | Total expenditure within a period on final goods and services bought for use in the Australian economy. | 7.5; 7.6 |
| *Net Current Expenditure on Goods and Services* - | | | |
| Personal consumption | 128 | Expenditure on goods and services for consumption by persons and private non-profit making bodies serving persons. Includes personal expenditure on motor vehicles and other durable goods and the imputed rent of owner-occupied dwellings, but excludes purchases of dwellings. Also excludes interest on consumer debt, such as instalment credit charges. | 7.5; 7.6 |

* See page 147 for key.

| Series description | Page | Explanatory notes | Bureau publication reference numbers* |
|---|---|---|---|
| NATIONAL ACCOUNTS - *continued* | | | |
| Public authorities | 129 | Expenditure by public authorities (not public enterprises) on wages, salaries and supplements, and on goods and services other than fixed assets and stocks. Fees, etc. charged by public authorities for goods sold and services rendered are offset against purchases. Net expenditure overseas by public authorities and purchases from public enterprises are included. All expenditure on defence is classified as current. | 7.5; 7.6 |
| *Gross Fixed Capital Expenditure* - | | | |
| Total | 130 | Expenditure on fixed assets whether for additions or replacements. This item includes expenditure on dwellings, other building and construction, vehicles, plant, machinery, etc., but excludes expenditure on fixed assets for defence purposes. It includes expenditure on second-hand assets, as well as new assets, less sales of existing assets. Expenditure on ordinary repair and maintenance is excluded as being chargeable to current account. All expenditure on roads, including maintenance, however, is classified as capital expenditure. | |
| Private | 131 | Expenditure on fixed assets, whether for additions or replacements. This item includes expenditure on second-hand assets as well as new assets, less sales of existing assets. Dwellings purchased by persons from public housing authorities are included in private capital expenditure. | |
| Imports of goods and services | 132 | Imports of goods and value of services (including transportation, travel, government and miscellaneous services) purchased from overseas residents by residents of Australia. | 7.5; 7.6; 8.2 |
| Exports of goods and services | 133 | Exports of goods, the value of services (including transportation, travel, government and miscellaneous services), provided to overseas residents by residents of Australia, and the net value of Australian gold production. | 7.5; 7.6; 8.2 |

* See page 147 for key.

# APPENDIX B

## METHODS OF ADJUSTMENT EMPLOYED

The seasonally adjusted series given in this bulletin and other publications of the Bureau have been calculated by means of computer programs of the Census Method II, X-11 Variant (for monthly series) and the X-11Q Variant (for quarterly series). As described in paragraphs 16 to 18 of the "Notes on Seasonal Adjustment Methods", the manner in which these programs have been employed for each series depends on the selection made from among alternative optional procedures allowed for in the programs. The selection of program options has been guided by the evidence of special analyses made for each individual series.

Users should particularly note whether use has been made of trading-day adjustment and of prior adjustment for the effects of movable holidays, namely Easter and Australia Day, since their application can materially affect the results obtained and the interpretation to be placed on them. Adjustments for trading-day effects and the effects of movable Easter and Australia Day holidays have been applied to series where special analyses made beforehand have shown that variations, arising from these effects, in the number of trading or working days in the month have significantly affected the series. For some of the series subject to trading-day adjustment, however, the results of analyses have not warranted further adjustment for Easter or Australia Day effects.

In seasonally adjusting the series by means of the X-11 and X-11Q programs, certain program options not referred to in the table below, were used. Details of these options are :

(1) Multiplicative adjustment has been used for all series with the exception of some components of the National Accounts series.

(2) Trading-day adjustments, where applied to monthly series, have been based upon prior daily weights derived from analyses made beforehand and applied to the entire series. Where trading-day adjustments have been applied, allowance for the length of month or quarter has been combined with trading-day factors.

(3) Prior adjustment has been used only for purposes referred to in the table.

(4) The program routine for adjusting the trend for the effect of severe industrial disputes has not been used for any series.

Moving averages for trend in monthly series are options specified in accordance with moving averages selected by the X-11 program in analyses made beforehand. Moving averages for monthly seasonal factors are standard (3x5-term) except where alternative options are specified. The X-11Q program has only standard program-selected moving averages for trend and seasonal factors.

Some of the components of the National Accounts series were not amenable to adjustment by the X-11Q program, and special adjustments were used. The special methods are described in the Supplement to the *Quarterly Estimates of National Income and Expenditure* No.35, March quarter 1969 (Reference No. 7.5). For those components which were adjusted by the X-11Q program, use was made only of standard limits for graduated treatment of extremes, and only the standard moving averages for trend (5-term) and seasonal (3x5-term) were available.

The application of other X-11 and X-11Q program options for each seasonally adjusted series published by the Bureau in this or other publications is as set out in the following tables.

TABLE 1

NOTE. For terminology refer to paragraphs 16 to 18 of the "Notes on Seasonal Adjustment Methods".

| Series description | Page No. | Moving averages used | | Limits for graduated treatment of extremes | Adjustment made for | | | |
|---|---|---|---|---|---|---|---|---|

| ALL OTHER *NATIONAL ACCOUNTS* SERIES ARE ADJUSTED AGGREGATIVELY. *SEE* TABLE 2. | | | | | | | | |

* These are X-11 program standard procedures which are employed unless an alternative is specified. The X-11Q program has only standard program-selected moving averages for trend and seasonal factors.

** Series not published in this bulletin.

\+ Denotes change in option or method previously selected for the adjustment of a series.

(a) Allowance by prior adjustment for the influence of trading-day variation together with major public holidays and patterns of annual leave which may vary from year to year.

(b) An apparent abrupt change in the seasonality affecting mainly December and January from December 1963.

(c) An apparent abrupt change in the seasonality affecting mainly November to April from November 1959.

(d) An apparent abrupt change in the seasonality affecting all months except July and August from September 1957.

(e) Seasonal adjustment factors were estimated from a prior adjusted series with allowance made for the effects of the Australian stevedoring strike in January - February 1956.

(f) Seasonal adjustment factors were estimated from a prior adjusted series with allowance made for the effect of the abrupt changes in level (1961-62 and 1966-67) due to changes in the base of the index. For the exports series, a prior correction was also made for an abrupt change in the seasonality affecting all quarters after March quarter 1969.

(g) An apparent abrupt change in the seasonality affecting all months except June from December 1957.

(h) Seasonal adjustment factors were estimated from a prior adjusted series with allowance made for the effect of the abrupt change in level (from June 1966 onwards) due to the adoption of new labour force definitions for the 1966 Population Census.

(i) The effect of the abrupt change in seasonal pattern (from June 1966 onwards) due to the adoption of new labour force definitions for the 1966 Population Census.

(j) The effect of changes in administrative recording procedure.

(k) An abrupt change in the seasonality affecting mainly June and December quarters after 1962.

(l) An abrupt change in the seasonality affecting mainly June to September, December and January after 1963.

(m) These half-yearly series have been seasonally adjusted by applying the standard X-11Q program to the quarterly series obtained by allocating the figures for the half-year ended June to the June quarter and the other half-year to the December quarter, while the average of the figures for each pair of June and December quarters is allocated to the intervening March or September quarter. The adjustment factors for the June and December quarters are then applied to the half-yearly series.

(n) Effects of twelve-weekly payments of child-endowment and war pension paid directly into savings bank accounts.

(o) Prior adjustment for variation due to the general business practice of monthly settlement of accounts at or near the end of the month, the perceptible effects of which vary according to the proximity of banks' weekly balancing days (Wednesdays) to the end of the month.

# TABLE 2 - AGGREGATIVELY ADJUSTED SERIES

It should be noted that, except where otherwise stated, the directly adjusted quarterly series referred to in the table below have been seasonally adjusted multiplicatively by the X-11Q program using *standard* program options, namely 5-term trend moving average, 3x5-term seasonal moving average, and limits for graduated treatment of extremes of 1.5 & 2.5 standard deviations. Details of special methods employed in the adjustment of the national accounts series are given in the Supplement to *Quarterly Estimates of National Income and Expenditure*, No. 35, March quarter 1969 (Reference No. 7.5).

| Series description | Page No. | Methods employed |
|---|---|---|
| Production - | | |
| Meat production | 47 | The sum of Beef, Veal, Mutton, Lamb and Pig meat. (For details of program options employed, *see* Table 1). |
| Overseas Transactions - | | |
| Gold and net foreign assets - official and banking institutions | 55 | Adjusted by first removing the components *allocated special drawing rights*, and *drawings against International Monetary Fund credit tranche;* then adjusting the residual multiplicatively using a 9-term trend moving average, a 3x5 seasonal moving average, and standard limits for graduated treatment of extremes; and, finally, adding back to this adjusted series the unadjusted components *allocated special drawing rights*, and *drawings against International Monetary Fund credit tranche*. |
| Overseas Arrivals and Departures - | | |
| Short-term visitors arriving | 56 | The sum of *short-term visitors excluding U.S. troops arriving for rest and recreation leave* (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and prior adjustment for the effects of the 1956 Olympic Games and the 1962 Commonwealth Games) and *U.S. troops arriving for rest and recreation leave* (adjusted only for trading-day variation). |
| Total arrivals | ** | The sum of *total arrivals excluding U.S. troops arriving for rest and recreation leave* (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and with prior adjustment for the effects of<br>(a) the 1956 Olympic Games and 1962 Commonwealth Games,<br>(b) an apparent abrupt change in seasonality affecting mainly January, February, March and July after December 1954,<br>(c) Easter after 1960),<br>and *U.S. troops arriving for rest and recreation leave* (adjusted only for trading-day variation). |

** Series not published in this bulletin

TABLE 2 - AGGREGATIVELY ADJUSTED SERIES - *continued*

| Series description | Page No. | Methods employed |
|---|---|---|
| Overseas Arrivals and Departures *continued* - | | |
| Total departures | ** | The sum of *total departures excluding U.S. troops departing from rest and recreation leave* (adjusted multiplicatively, using 23-term trend moving average, 3x9-term seasonal moving average, standard limits for graduated treatment of extremes, with adjustment for trading-day variation and with prior adjustment for the effects of<br>(a) the 1956 Olympic Games,<br>(b) an apparent abrupt change in seasonality affecting all months except June after December 1957),<br>and *U.S. troops departing from rest and recreation leave* (adjusted only for trading-day variation). |
| Employment and Labour - | | |
| *Number Registered for Employment* - | | |
| Males | 74 | The sum of *number registered excluding school-leavers* (for details of program options employed, *see* Table 1) and *number of school-leavers registered* (adjusted multiplicatively using 13-term trend moving average, standard 3x5-term seasonal moving average, and limits 2.5 & 4.0 for graduated treatment of extremes). |
| Females | 75 | As for males. |
| Persons | 76 | As for males. |
| Internal Trade | | |
| *Registrations of new motor vehicles* - Total | 92 | The sum of the directly adjusted series *Registrations of new motor vehicles - Cars and station Wagons* and *Registrations of new motor vehicles - Other vehicles*. (For details of program options employed *see* Table 1.) |
| Finance - | | |
| *Instalment Credit for Retail Sales - Balances Outstanding*- | | |
| All businesses | 121 | The sum of the directly adjusted quarterly series for *retail businesses* and the corresponding quarterly figures in the directly adjusted monthly series for *non-retail finance businesses*. (For details of program options employed, *see* Table 1). Monthly figures are available only for non-retail finance businesses, the major component, and the adjustment on this basis is preferred to a directly adjusted quarterly series. |

** Series not published in this bulletin.

TABLE 2 - AGGREGATIVELY ADJUSTED SERIES - *continued*

| Series description | Page No. | Methods employed |
|---|---|---|
| National Accounts - | | |
| Wages, salaries and supplements | 126 | Directly adjusted, *see* Table 1. |
| Gross operating surplus of trading enterprises - | | |
| Companies | ** | Directly adjusted, *see* Table 1. |
| Other | ** | The sum of farm and non-farm.<br>Farm : gross farm product at factor cost (see below) less three farm cost series (directly adjusted) and farm company income (directly adjusted).<br>Non-farm : The sum of five component series (directly adjusted). |
| Gross national product at factor cost | ** | The sum of the three preceding series. |
| Indirect taxes less subsidies | ** | Directly adjusted, *see* Table 1. |
| Gross national product | 123 | The sum of the two preceding series. |
| Imports of goods and services | 132 | The sum of three directly adjusted series (imports f.o.b.; transportation and travel; and other goods and services). |
| National turnover of goods and services | ** | The sum of the two preceding series. |
| Exports of goods and services | 133 | The sum of four directly adjusted series (exports f.o.b.; transportation and travel; gold production; and other goods and services). |
| Gross national expenditure | 127 | The difference between the two preceding series. |
| *Personal consumption expenditure* - | | |
| Food | ** | Directly adjusted, *see* Table 1. |
| Cigarettes, tobacco and alcoholic drinks | ** | The sum of two directly adjusted series (cigarettes and tobacco; alcoholic drinks). |
| Clothing, footwear and drapery | ** | Directly adjusted, *see* Table 1. |
| Household durables | ** | The sum of two directly adjusted series (electrical goods; and other household durables). |
| Purchases of motor vehicles | ** | Directly adjusted, *see* Table 1. |
| Rent | ** | Seasonality is not significant and the original series is therefore used. |
| Other goods and services | ** | The sum of 6 directly adjusted series and the original series for postal and telephone services. |
| Total | 128 | The sum of 15 component series. |

** Series not published in this bulletin.

TABLE 2 - AGGREGATIVELY ADJUSTED SERIES - *continued*

| Series description | Page No. | Methods employed |
|---|---|---|
| National Accounts - *continued* - | | |
| *Net current expenditure on goods and services* - | | |
| Financial enterprises | ** | Directly adjusted, *see* Table 1. |
| Public authorities | 129 | Directly adjusted, *see* Table 1. |
| *Gross fixed capital expenditure* - | | |
| Private - Dwellings | ** | Directly adjusted, *see* Table 1. |
| Other new building and construction | ** | Directly adjusted, *see* Table 1. |
| All other | ** | Directly adjusted, *see* Table 1. |
| Total | 131 | The sum of the three adjusted components above. |
| Public enterprises | ** | Directly adjusted. *see* Table 1. |
| Public authorities | ** | Directly adjusted. *see* Table 1 |
| Total | 130 | The sum of the three adjusted components above. |
| Increase in value of stocks) Statistical discrepancy ) | ** | Balancing item in the seasonally adjusted account. |
| *Gross national product at factor cost* - | | |
| Farm | 124 | Special adjustments of four components of gross value of production (wool, wheat, other grain and sugar cane) plus three directly adjusted series (other pastoral products; other crops; and dairying, poultry, etc), less special adjustment of wheat marketing costs and less three directly adjusted cost series. |
| Non-farm | 125 | Difference between gross national product at factor cost and the farm component. As the farm component is utilised in obtaining gross national product at factor cost, the non-farm component is independent of the special adjustments used in the farm component. |

** Series not published in this bulletin.

# APPENDIX C

## MEASURES OF VARIABILITY

The following table shows, for series included in this bulletin and all other series published in seasonally adjusted form by the Bureau, selected measures of variability of the original and seasonally adjusted series, and of component series as computed in the course of seasonal adjustment, i.e. the trend, seasonal and irregular components. A corresponding measure of the variability of trading-day adjustment factors, where applicable, is also shown.

Where prior adjustments have been made (for such effects as the influence of Easter, Australia Day, or an apparent abrupt change in seasonality0 their effect is excluded from the measures of variability given below for trend, irregular, seasonal factors and trading-day adjustments.

In some instances these figures are derived from analyses which do not include the latest available data.
